

# Why choose laminate flooring?

**Balterio** laminate flooring has many advantages. Some of these are:

- It is cheaper than engineered or solid timber flooring.
- Impact resistant – the core boards can resist impacts from high heels, falling objects..
- It has a revolutionary joint locking system known as Click Xpress®. This is a unique rolling system which allows laminate to be installed in hardly any time at all, without using glue. It was tested in Germany by a leading consumer Advise and Test magazine and voted the most install friendly installation system.
- Wear-resistance is guaranteed by the wear-resistant surface together with the hard core.
- Fire Class – thanks to the high density core boards, the product is difficult to ignite.
- Dimensional stability – the high quality core boards limit the effect of relative humidity on your Balterio laminate floor, in comparison with solid wood or chipboard. Any small degree of swelling of 1 mm per walking meter is dealt with by means of an expansion joint.
- Underfloor heating – Balterio laminate floors are perfectly compatible with underfloor heating of the ‘water system’ type, without you having a higher energy bill in comparison with classic heating systems.
- Your Balterio laminate also comes with a 25 year residential warranty or 12 year commercial warranty.
